Notes to Customer:

Package your blades thoughtfully. Wrap all blades together in a tight non-shifting bundle, then place bundle tightly in a box. Use strapping tape around box in all three directions to keep contents from breaking through.

We will grind all blades with geometry for cutting Mild Steel unless you specify otherwise (e.g. Stainless Steel, Aluminum, Bronze, Copper, etc.) You can state your preference in the 'Comments' box above ("Grind all blades for S.S." or "Grind one 350mm for Aluminum") or indicate on each blade with a permanent marker or note. Upon first sharpening, we will record the material type for future reference.

We engrave your name and the number of teeth on each blade.

You may request to have a blade changed to a different number of teeth. Additional charge will apply. See cost on our website on the 'CNC Sharpening' page in the notes below the Sharpening Price List.
